

LEAD-BASED PAINT

Did you know that many homes built prior to 1978 have potential for lead-based paint? While lead-based paint is not hazardous when properly encapsulated under other coats of paint, it is important to understand how to identify lead-based paint and what you can do to reduce risk of exposure for your family.

DO

- Notify maintenance if you notice deteriorating paint (peeling, chipping, chalking, cracking or damaged paint) on surfaces that get a lot of wear and tear such as:
 - Windows and windowsills
 - Doors and door frames
 - Stairs, railings, banisters and porches
- Regularly clean floors, windowsills and other surfaces.
- Keep play areas clean.
- Wash children's hands, bottles, pacifiers and toys often.
- Remove shoes or wipe soil off shoes before entering your house.

DON'T

- Try to remove lead-based paint yourself.
- Let children chew on windowsills or other painted surfaces or ingest soil.
- Perform your own lead-based paint inspection or test. This should be completed by a certified lead-based paint technician or environmental contractor following EPA and OSHA guidelines.
